

Bicycling Traffic Skills

Know your role on the road!

2017 Class dates listed on CAT calendar at www.LVCAT.org

Whether you're a club cyclist, a racer who trains on the road, a bicycle commuter, a policy maker, or new to cycling, this class is for you!!

This full-day class will provide each student with personal experience and perspective as a cyclist in traffic flow. This course will build intuition on cyclists' issues such as: door zones, lane positioning, communication with motorists, complex intersections, parking, signage, bike lanes, and multi-use paths/trails. Since all these issues affect cyclist safety and "bikeability" of our cities, this course is a "must".

The course will also cover more fundamental aspects of cycling, basic bicycle maintenance and basic handling skills - which are also an important component of cycling for transportation.

The course will include classroom and shop instruction, as well as on-bike instruction on a closed course and on local streets. The combination of these environments will build your confidence and intuition on the bike.

**Organized by: CAT-Coalition for Appropriate Transportation
1935 West Broad Street, Bethlehem, PA
18018**

Cost: \$100 per person (or pay what you will for limited income)

Ages: 14 to adult, and beyond

Registration deadline: One week prior to class date
